## PROFESSIONAL SUMMARY

Security engineer with 8+ years across detection engineering, threat hunting, and security automation, backed by hands-on cloud security (AWS, Azure) and application security (SAST, DAST, SCA) work. I build TTP-focused detections in Sigma, YARA, and Python mapped to MITRE ATT&CK, and I run them as detection-as-code in Splunk and Elasticsearch across endpoint, network, and cloud telemetry. Comfortable owning SOAR-driven incident response, third-party and supply-chain risk management, and compliance work such as PCI DSS 4.0. I delivered detections at Morgan Stanley and BNP Paribas, and today I help architect an AI-assisted security operations platform that ties together 40+ security services.

## TECHNICAL SKILLS

**Detection Engineering & Threat Hunting:** Detection-as-Code, MITRE ATT&CK, Cyber Kill Chain, Sigma, YARA, Hypothesis-driven threat hunting, Threat intelligence (CTI), Alert tuning, Attack simulation (Atomic Red Team, Caldera)

**SIEM, SOAR & Log Analysis:** Splunk (SPL), Splunk Enterprise Security, Elasticsearch, Kibana, Microsoft Sentinel, KQL, Elasticsearch Query DSL, SOAR automation, Grok, Regex

**Endpoint & Network Security:** Microsoft Defender for Endpoint, CrowdStrike, Trend Micro, EDR telemetry analysis and deployment, Sysmon, auditd, Zeek, IDS/IPS, Packet analysis (Wireshark), TCP/IP

**Cloud Security & Infrastructure:** AWS (GuardDuty, WAF, CloudTrail, IAM), Azure, Cloud security monitoring, Cloud log collection for SIEM, Docker, Kubernetes, Terraform (Infrastructure as Code)

**Application Security:** SAST (Static Application Security Testing), DAST (Dynamic Application Security Testing), SCA (Software Composition Analysis), CI/CD pipeline security, OWASP Top 10, Burp Suite

**Governance, Risk & Compliance:** Incident response (NIST/SANS lifecycle), Alert triage and investigation, Third-party and supply-chain risk management (SecurityScorecard, BitSight), PCI DSS 4.0, Static and dynamic malware analysis, PE file triage (PeStudio, PEiD), Sandboxing (Cuckoo Sandbox, ANY.RUN)

**Automation & Scripting:** Python, PowerShell, Bash, REST API integration, Log parsing, Security automation, Anomaly detection, AI-assisted automation, Jupyter Notebook

## PROFESSIONAL EXPERIENCE

### Senior Security Engineer, Verint Systems (Remote)

*August 2023 to Present*

- Built an enterprise security operations platform that connects 40+ security services through unified Python APIs, so teams can enrich, correlate, and respond to alerts across tools from one place
- Wrote and tuned detection rules mapped to MITRE ATT&CK in Splunk and CrowdStrike using Sigma, KQL, and Python, managing them as detection-as-code and refining them with triage feedback to cut false positives
- Ran hypothesis-driven threat hunts with teammates across endpoint, cloud, and identity telemetry, turning findings into new detections and documented hunt playbooks
- Rolled out Endpoint Detection and Response (EDR) across 20,000+ devices through automation, improving threat visibility and supporting PCI DSS 4.0 compliance
- Led third-party and supply-chain risk management with SecurityScorecard, lifting the enterprise security posture rating from 72 to 95
- Piloted and rolled out BitSight for third-party risk, streamlining vendor security assessments and saving around $26K a year
- Added SAST, DAST, and SCA scanning to CI/CD pipelines, noticeably reducing the vulnerabilities that reached production
- Built AI-driven change advisory and ticket-resolution systems that flag risk and track SLA compliance across the estate
- Created an automated security task-distribution system that handles 500+ tasks a month through Jira workflows and containerized deployments

### Senior Associate, Threat Hunt and Detection Engineering, Morgan Stanley (Bengaluru, India)

*March 2022 to July 2023*

- Developed TTP-focused detection analytics in Sigma, YARA, and Python mapped to MITRE ATT&CK, managed as detection-as-code in Splunk and CrowdStrike to catch adversary activity across the firm's networks
- Built alerts from raw and aggregated telemetry and enrichment sources, aligned to MITRE ATT&CK tactics and techniques and mapped to internal security use cases
- Automated triage and investigation workflows that pivot across Sysmon (Windows), auditd (Linux), and CmdReporter (macOS) telemetry
- Ran proactive threat hunts, investigated phishing, access-control violations, endpoint events, and network anomalies, and responded to security incidents

### Information Security Engineer, Logging and Detection, BNP Paribas (Mumbai, India)

*December 2020 to March 2022*

- Wrote Grok parsing patterns to ingest IT infrastructure logs into Elasticsearch
- Built SIEM use cases and Kibana dashboards for real-time threat detection
- Created Elasticsearch Query DSL queries and Sigma rules mapped to MITRE ATT&CK, strengthening enterprise threat detection coverage

### Senior Associate, Security Intelligence, Netsurion Technologies Private Limited (Bengaluru, India)

*December 2017 to December 2020*

- Analysed customer-submitted malicious process samples using static and dynamic analysis, including memory dump analysis, and wrote detailed reports
- Built SIEM and Kibana dashboards, threat hunting rules, and security use cases for managed security service clients, and tuned alerts to catch threats in real time
- Wrote PowerShell and Python integrations that pulled security data from cloud infrastructure and network devices into the SIEM for monitoring
- Deployed and ran attack simulation frameworks (Red Canary's Atomic Red Team, Caldera) to validate security controls against emerging techniques

## EDUCATION

**Bachelor of Engineering (BE), Computer Science**, Visvesvaraya Technological University, Bengaluru, India

*August 2013 to May 2017*
